

Lights Off

In conjunction with our local Utility Company we have recently completed an entire overhaul of our Offices and Warehouse lighting to new high energy efficient lighting fixtures.

In our warehouse we have replaced 400 watt, sodium lights with T5 fixtures. Each fixture is equipped with motion sensors, allowing lighting in unused areas to turn off when the area is unoccupied. These new fixtures and the new ballasts require less than 50% of the wattage used in our old system.

We have also replaced all overhead lighting in our offices to high energy efficient systems also on automatic turn off sensors.

The savings in energy cost are not only amazing, but the new systems provides for a significant increase in illumination.

While we were at it we implemented a software design to shut down all computer monitors when not used for twenty minutes and to have all non essential computers to turn off after normal working hours.

Reliable Van & Storage is proud to play a part in Energy Conservation.
